

How to send emails using JAHIA with gmail SMTP

First you will have to allow gmail to use less secure apps by following these steps:

Allow less secure apps on Gmail

1. Go to the "Less secure apps" section.
<https://myaccount.google.com/lesssecureapps?pli=1>
2. Turn on the option **Allow less secure apps**

Secondly, you may send emails using any Java API

Sending emails with javax.mail:

1. Create a servlet using spring: <https://github.com/Jahia/spring-servlet-osgi-module>
2. Connect to the SMTP server using the javax.mail.Authenticator API (or any other for that matter)

```
final String username = "xumak.poc@gmail.com";  
final String password = "p4ssw0rd!!!";
```

```
Properties props = new Properties();  
props.put("mail.smtp.auth", "true");  
props.put("mail.smtp.starttls.enable", "true");  
props.put("mail.smtp.host", "smtp.gmail.com");  
props.put("mail.smtp.port", "587");
```

```
Session session = Session.getInstance(props,  
    new javax.mail.Authenticator() {  
        protected PasswordAuthentication getPasswordAuthenticata
```

```
tion() {  
    return new PasswordAuthentication(username, password);  
}  
});
```

1. Send an email

```
Message message = new MimeMessage(session);  
message.setFrom(new InternetAddress("xumak.poc@gmail.com"));  
  
message.setRecipients(Message.RecipientType.TO,  
    InternetAddress.parse(account));  
message.setSubject("Saludos");  
message.setText("Querido amigo,"  
    + "\n\n Muchos saludos");  
  
Transport.send(message);
```
